

## **Job Specifications:**

**Senior Analyst - Business Consulting**

**Technology Risk**

**FY2023-24**

## **The Opportunity**

The business environment, along with our clients' needs and expectations, is changing quickly and markedly. Key market trends - technological advances, globalization, and evolving laws, regulations and standards - are transforming businesses, including business processes and related data flows but also making them more complex. The pace of these trends is accelerating, resulting in a fundamentally different business environment. Companies are larger, more global, more complex and subject to greater legal, regulatory and accounting standards changes than ever before. As a result, risks, particularly technology risks, are escalating. One of the key areas of change is the increased use of Information Technology (IT) by companies, making IT increasingly vital to everything companies do. Companies are implementing newer technologies such as cloud, big data, mobile, social, blockchain, artificial intelligence, robotics, the internet of things, sensors and more, to bring about change faster, more continuously and with more rapid adoption rates. Business and technology are rapidly converging. As companies implement newer technologies to improve their business, they generally increase the complexity of their business (e.g. creating more ways to initiate, record, process, and report transactions) and their IT environment (e.g., rapid pace of technology change, large number of in-scope applications and supporting technologies, increased use of outsourcing, increased use of end-user-reporting and computing tools). While creating many benefits, the added complexity is increasing risks. To keep pace with the increased use of technology and assess the related risks, seamless integration of our Technology Risk professionals across service lines and with other Consulting domains is becoming more important to bringing comprehensive solutions to our clients that transform their business while protecting and enabling sustainable business performance.

## **Your Key Responsibilities**

- ✦ Execution on client engagement - Ensure quality delivery as per client requirements within stipulated timeline.
- ✦ Continuously strive towards exceeding client & team expectations and work on increasingly complex assignments.
- ✦ Work with the team and the client to create plans for accomplishing engagement objectives and a strategy that complies with professional standards and advise clients to understand and manage their business risks and verify the validity of their business information.
- ✦ Demonstrate a thorough understanding of compliance, financial, IT, and operational risks along with performing control testing, develop plans, and provide Technology Risk services.
- ✦ Understand business & industry issues/trends. Identify areas requiring improvement in the client's business processes to enable preparation of recommendations.
- ✦ Conduct research and prepare client presentations, information memorandums and thought leadership documents.

- ✦ Manage the engagement budgets and support superiors in developing marketing collaterals, business proposals and new solution / methodology development.
- ✦ Keep abreast with developments in business related areas and assist team leaders/managers in preparing client decks.
- ✦ Attend L&D programs and exhibit through knowledge of consulting methodology and consulting attributes.
- ✦ Sector focus (basic understanding of the industry, trends, issues/challenges & key players) based on the industry group alignment.
- ✦ Ensure compliance with engagement plans and internal quality & risk management procedures.
- ✦ Develop strong working relationships with client (process owner/functional heads).
- ✦ Exhibit initiative and participate in corporate social and team events.
